**LIFE MAPPER**

MApping, ProtEcting, and Restoring Marine Ecosystems

## **Executive Summary**

The objective of the present deliverable is the creation of a webpage on the beneficiaries' websites or social media accounts presenting the project and including i) project logs and LIFE flag with co-funded statement, ii) project details, iii) project summary, iv) coordinator contact, v) partnership.

This will help in giving visibility to the project and disseminate project activities and results to different kind of public, going from academia, stakeholders and local authorities and the general public.

**LIFE MAPPER**

MAPPING, PROTECTING, AND RESTORING MARINE ECOSYSTEMS

## 1 Content of the webpage

The content of the webpage agreed among the beneficiaries and uploaded on beneficiaries' websites is the following:

- 1) LIFE MAPPER logo
- 2) LIFE logo with co-funded statement
- 3) LIFE MAPPER project details
- 4) LIFE MAPPER summary and objectives
- 5) Contact details
- 6) Partnership

MAPPING, PROTECTING, AND RESTORING MARINE ECOSYSTEMS

**LIFE MAPPER**

MAPPING, PROTECTING, AND RESTORING MARINE ECOSYSTEMS

Co-funded by  
the European Union

**LIFE MAPPER**

**Project title:** Guidelines for MAPPING, PROTECTING, and RESTORING Marine Ecosystems

**Call:** LIFE-2024-PLP

**Type of Action:** LIFE-PJG

**Acronym:** LIFE24-PRE-IT-LIFE MAPPER

**Number:** 101213793

**Duration:** 36 months

**Start Date:** 01 May 2025

**Estimated Project Cost:** €1,290,850.61

**Requested EU Contribution:** €1,161,765.55

**Coordinated by:** CNR ISMAR

**Summary:**

Healthy marine habitats are vital for maintaining marine biodiversity and providing ecosystem services like food supply and climate regulation. However, decades of intensive exploitation and poor management have led to degradation of many European marine habitats, weakening larger ecosystems and reducing their resilience to climate change. The EU has introduced the

Nature Restoration Law to halt biodiversity loss and restore ecosystems, positioning itself as a global leader in addressing environmental crises. Recent research highlights that vast areas of EU marine habitats remain unmapped, with existing maps often lacking detailed biological data on species and communities. To address this, comprehensive guidelines are needed to systematize habitat information across EU marine regions and align efforts with directives like the Marine Strategy Framework Directive, the Habitats Directive, and the EU Biodiversity Strategy 2030.

LIFE MAPPER initiative seeks to consolidate current knowledge and best practices in marine habitat mapping and restoration.

LIFE MAPPER Objectives:

1. Develop guidelines for mapping marine habitats, selecting suitable technologies, and conducting a cost/benefit analysis of mapping benthic habitat types;
2. Create methodologies to assess habitat quality, quantity, and connectivity, and identify reference conditions for both habitats and species;
3. Provide guidelines for selecting restoration methods, identifying knowledge gaps, and estimating costs for habitat restoration;
4. Develop a framework for prioritizing conservation and restoration actions to maximize ecological benefits and optimize resource allocation.

LIFE MAPPER will deliver its results through the **LIFE MAPPER Manual and the Knowledge Platform**. By working with EU Member States, the European Commission, and relevant agencies, LIFE MAPPER will help advance the implementation of environmental directives, ensuring effective marine conservation and restoration across Europe.
